

AIC 908 protection of the fuel connections to prevent sabotage

The connections „FEED LINE TO ENGINE“ and „RETURN LINE FROM ENGINE“ (A+B) can be protected with thermo retractable hoses (Type ETW 803/24-8, length 60 mm).

These can be marked "AIC SYSTEMS" on request.

The connection „FEED LINE FROM TANK“ (C) does not need to be protected (if this connection is removed the engine stop).

The electrical connection (D) is no more made with a standard connector, but delivered with a 1 meter long cable + connector and thermo retractable hose over the connector.

Your meter is than completely sealed.
